Change Log

Arrangement 5 - CVBD Charging Pump 1(26CVBD-PL-5701) Equipment Summary (8SD73A)

<i>Version</i>	<i>Latest Status</i>	<i>Issue Date</i>	<i>Description of Change</i>
v0.0	In Work	10 Mar 2023	
v1.0	Signed	12 Mar 2023	The first version for review.
v2.0	Signed	27 Mar 2023	Updated based on the reviewer's comment.
v2.1	Signed	29 Mar 2023	Updated based on the reviewer's comment. The native word file with revision track with respect to the first version is attached.
v2.2	Signed	06 Apr 2023	Since the estimated power consumption of 200 kW is with margin, this pump should be LV load instead of MV load. The interface sheets IS-43-26 need to be updated.
v2.3	Approved	07 Apr 2023	The pump is changed to the original MV (6.6 kV) load, considering the fact that pump efficiency of canned pump is 10~20% lower than standard centrifugal pump, and to avoid impact for PBS43 design.

OPERATIONAL NARRATIVE

CVBD Charging pump recirculates primary water in Volume control tank to the circuit of IBED (Integrated loop of Blanket, ELM-VS, and Divertor) PHTS (Primary Heat Transfer System) during operation.

Notes:

- Motor shall be selected to cover end-of-curve of the pump.
- The connected piping is subject to French ESPN/PED Order, but the pump is excluded from French ESPN/PED Order. Supplier to refer to Article 1, section 2.(j) of DIRECTIVE 2014/68/EU. Pump will be subject to Directive 2006/42/EC known as the Machinery Directive.
- Approximate footprint is based on 3d model approved configuration.
- Nozzles are flanged. Counter flanges with a pipe stub that will be butt-welded to inlet/outlet piping shall be provided.
- Motor shall have fully encapsulated winding system as described in IEC 60034-1 and IEC 60072. Minimum insulation class shall be in accordance with the API 685.
- Minimum documentation shall include: Quality plans, Manufacturing & inspection plans, Procedures, Calculation note (where design is involved), Working instructions, Special process qualifications (if applicable), Operator qualifications, As-built drawings, Contractor release note, Certificate of conformity, Material certification and inspection documents according to EN 10204 Type 3.1 (or equivalent) traceable to the component part and equipment.
- Pump PL-5701 operates during plasma/standby/baking mode and PL-5703 operates during baking mode when the head requirements are higher. Utilizing two separate pumps for the main operating modes of CVBD reduces the demand on either pump and allows a smaller pump to be used for plasma operation.
