N2	80 / 40S	Outlet
N3	25/40S	Casing drain

Notes:

- Motor shall be selected to cover end-of-curve of the pump.
- The connected piping is subject to French ESPN/PED Order, but the pump is excluded from French ESPN/PED Order. Supplier to refer to Article 1, section 2.(j) of DIRECTIVE 2014/68/EU. Pump will be subject to Directive 2006/42/EC known as the Machinery Directive.
- Approximate footprint is based on 3d model approved configuration.
- Nozzles are flanged. Counter flanges with a pipe stub that will be butt-welded to inlet/outlet piping shall be provided.
- Motor shall have fully encapsulated winding system as described in IEC 60034-1 and IEC 60072. Minimum insulation class shall be in accordance with the API 685.
- Minimum documentation shall include: Quality plans, Manufacturing & inspection plans, Procedures, Calculation note (where design is involved), Working instructions, Special process qualifications (if applicable), Operator qualifications, As-built drawings, Contractor release note, Certificate of conformity, Material certification and inspection documents according to EN 10204 Type 3.1 (or equivalent) traceable to the component part and equipment.
- Pump PL-5701 operates during plasma/standby/baking mode and PL-5703 operates during baking mode when the head requirements are higher. Utilizing two separate pumps for the main operating modes of CVBD reduces the demand on either pump and allows for a smaller pump to be used for plasma operation.
